## DETAILED ACTION

### *Response to Amendment*

1. The reply filed 05/04/2007 was applied to the following effect: All relevant objections and rejections are withdrawn as being satisfied. Therefore, the Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

### *Reasons for Allowance*

2. Claims 1-15 and 17-60 are allowed (renumbered as 1-59, respectively).

The following is an examiner's statement of reasons for allowance:

This application is for an OPTICAL DISC DEVICE HAVING FIXING PARTS FOR DIRECTLY FIXING A FRAME OF THE OPTICAL DISK DEVICE TO AN ELECTRONIC DEVICE.

- **Claim 1** specifies an optical disk device disposed in an electronic device, which requires:

*"wherein the frame has an uplift part rising to a surface side on which a disk is mounted, the uplift part includes a side part of the frame and a top part provided on said side part, said side part of the uplift part is formed to be thicker in the direction of thickness than a side part of the frame that is near the uplift part, and the top part forms a part of the inner peripheral part of a through hole provided in the frame."*

The closest prior art of record, Watanabe et al. (US 6,111, 837) fails to teach, show or suggest, by either anticipating or rendering obvious, the invention as set forth in claim 1 of the instant application. Furthermore, the search made does not detect the combined claimed elements as set forth in pending claim 1. None of the cited prior art of record discloses such an optical disc device disposed in an electronic device, as set forth in the manner, function and relationship

Art Unit: 2627

relative to other claimed structures as prescribed by claim 1. Specifically, Watanabe et al. disclose an optical disk device comprising: a frame (i.e., base) 222; an optical pickup module 205, fixed to the frame 222 [col. 23, lines 39-40]; and a circuit board 251, forming a control circuit fixed to the frame 222 [col. 29, lines 24-40]; wherein the frame 222 is provided with fixing parts 222d-f to other members [Fig. 31A]. Further, Watanabe et al. does not teach, show or suggest *“the frame has an uplift part rising to a surface side on which a disk is mounted, the uplift part includes a side part of the frame and a top part provided on said side part, said side part of the uplift part is formed to be thicker in the direction of thickness than a side part of the frame that is near the uplift part, and the top part forms a part of the inner peripheral part of a through hole provided in the frame”* as claimed in the present invention.

Therefore, these features, in combination with other features of claim 1, are not anticipated by, nor made obvious over, the closest prior art of record of Watanabe et al. (US 6,111, 837).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
